tribal

second edition

Second generation : Tribal 07

In less than one year the Tribal has become the C-Shape hybrid full de-power kite reference. Bringing you enjoyment, feeling, improvement, the Tribal II will stun you. It is a blend of different qualities and it adapts to all areas and styles, from beginners to pros, in free-ride, freestyle, wave-riding and crossing, it stands out every time. Outcome of our know-how, it can be powerful in light wind, smooth in strong wind. Quick to steer it remains predictable. The new Integral system does not interfere with the bar feeling. The de-power is progressive and super efficient, you get an immediate feedback which puts you at ease to attempt some new and crazy moves. The steering on the small sizes has been slowed down to bring better control. We successfully combined flying qualities found on the Impact with de-power found on the Tribal. You control power and steering, you are in charge not your kite..

In your hands :

We focused on the bar feeling. Light in your hands with a controlled steering, you can lead your kite with unmatched accuracy! The drag remains smooth in the upper range, you can easily ride unhooked, and kite loops are kids play even in strong wind. With the progressive de-power you keep the bar feeling of a classic kite. You know where your kite is at all times. The integral de-power only comes in when needed.

Design :

The need of today's pro riders is for a constant and more comfortable pull, more so than sheer performance, which is also what riders of all level are looking for as well. The C-shape is the most suitable to achieve all that. The Tribal offers all these advantages by combining C-shape, Life Line, and Integral de-power.

SECURITE

Safety is our number 1 priority:

- 1) Providing a leash to be able to release the kite anywhere without putting others at risks.
- 2) Being able to land the kite alone in front of any obstacle in any wind without being dragged.
- 3) Providing easy re-launches.
- 4) Extended de-power for better safety and comfort.
- 5) Guarantying reliability and quality of the quick release and accessories.

Other concepts that do not present all these qualities cannot, in our minds be held. One has to know that an extended de-power is not an absolute safety it just brings comfort but does not justify the lack of a leash which is essential for the safety of others. Today the only options we have to kill 100% of the power in any situation is the Life Line which makes the kite to fall over on its back and keep it on the ground.

INTEGRAL SYSTEM

We have proven with the Tribal that it was possible to have full de-power with a C-Shape kite. For the 07 models we have improved the INTEGRAL System; greater de-power capacity but most of all no interferences with your steering. Clearer and more precise riding sensations, you place the kite wherever you want with ideal power. The Life Line is there for easy re-launching and maximum safety in any conditions. This year the INTEGRAL System adapts on all the F-one range from beginner to pro.

C-SHAPE Round tips :

The C-shape geometry remains the most efficient kite technology in terms of flight qualities, sheer performances and re-launching. C shape brings the rider a genuine bar feeling.

KISS : Keep It Simple System :

Keep It Simple System : 3 lines + 1 life line and a Y bridle in the kite, no pulleys or complicated bridles!

LIFE LINE :

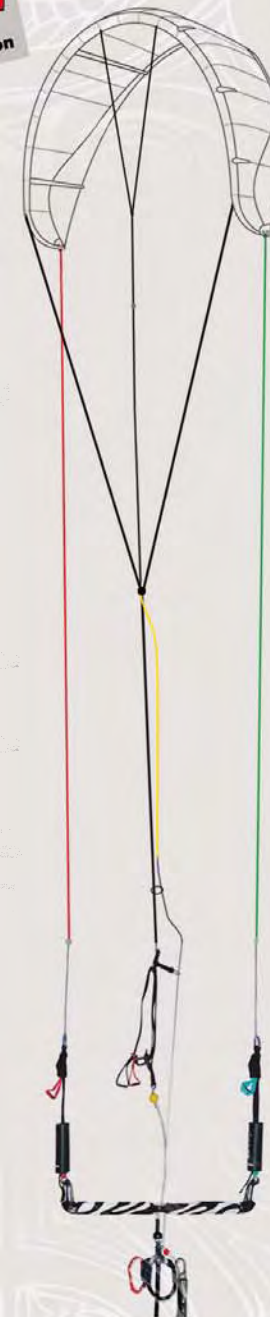

The Life Line helps out for the relaunching and offers full safety in any conditions

STOP & GO :

When you let go of the bar, the kite loses its power and slowly descends to the edge of the window, stops on its tip and waits for you there! Grab the bar and go!
